

Designated Person Ashore DPA Training Course Outline

Introduction

The ISM Code provides an international standard for the safe management and operation of ships, and for pollution prevention. Under the Code, shipowners and charterers are required to establish and implement a safety management policy, supported by “a person or persons ashore having direct access to the highest level of management”. This course will give you the knowledge and skills you need to fulfil your role as Designated Person Ashore (DPA) in accordance with International Marine Organization (IMO) guidance and recommendations.

Objectives

By the end of the course, you will be able to:

- Apply techniques and methodology learnt on the course to improve your management system
- Enhance your management system through your in-depth knowledge and improved communication skills
- Develop your relationships with senior crew officers and top-level management ashore
- Understand the responsibilities and skills required to carry out the duties of a DPA

Methodology

This training course will combine presentations with instructor-guided interactive discussions between delegates relating to their interests. Practical exercises, video material and case studies aiming at stimulating these discussions and providing maximum benefit to the participants will support the formal presentation sessions. Above all, extensive use of case examples and case studies of issues has been personally involved.

Target Audience

This course is suitable for anyone serving as a DPA or assistant DPA; it's also highly recommended if you're looking to become a DPA, and your duties involve safety and pollution prevention. Your company will benefit from having a team member able to take on this vital role in achieving compliance with the ISM Code.

Topics

Module 1 – Introduction

- Introduction – ISM Code

Module 2 – Requirements

- Requirements for the DPA in the 21st century
- Maritime Management Systems

Module 3 – Modern Systems

- Principles of modern Management systems
